MAC Driver Introduction

Important:

1. Please keep Driver running when you are using the board
2. You can choose Language in setting first
3. If you move the position of the board or projector, you will need to calibrate again

Setting up auto run application in Mac OS

Step 1: After the driver is installed successfully, choose “System Preferences” from the desktop icon.

Step 2: Click “Accounts” in System settings.

Step 3: Click “Login Items” and then “ +” to add applications.

Step 4: Choose the application and click the “Add”.

Step 5: The applications on the list will run automatically when you log in the computer.

Procedure of using Mac Driver

1. Procedure of using the driver and enote software must be following the steps below, or else some problem may occur to the touch functions:
 - 1.1 Connect the iwB to the MAC USB slot
 - 1.2 Run the driver software using mouse, make sure the driver shows whiteboard connected.
During using:
 - A. Driver needs to be kept running
 - B. Do not unplug the iwB.(if iwB is unplugged, reconnect the iwB and click on reconnect in the driver using mouse)
 - 1.3 calibrate the iwB, if resolution is changed, then calibration is needed to be redone.
2. If the software stopped working during using, it is needed to unplug the iwB, then reboot the Mac system, and start following the steps from step 1.
